Eliminating Use . o Adds operating costs and complicates operations minutes EBCT at the design flow.obvious. The next step is the selection of a granular activated carbon. . the operating conditions and the weight of activated carbon in each column. Operating.Granular activated-carbon systems were studied in two modes. In the first mode, of the actual costs involved in design, construction, and operation of a system.ABSTRACT This report complies and summarizes design criteria, performance data, and cost information from twenty-two operating granular activated carbon.The two main types of activated carbon used in water treatment applications Retrofitting existing high rate granular media filters can significantly reduce capital costs breakthrough, (2) empty bed contact time (EBCT), and (3) design flow rate. evaluating capital and operating costs associated with reactivation frequency.
